RECEIVED

Applicant hereby responds under 35 U.S.C. §1.116 to the official action mailed August 1, 2003 (Paper No. 9). This response consists of:

SEP 25 2003

- amended claims 1-6 and 8 on following pages 2-5;
- appended remarks, pages 6-10;
- a transmittal letter containing a contingent charge authorization; and,
- a facsimile cover sheet.

OFFICIAL

This response places the case in condition for allowance. No issues are presented after final rejection involving substantial consideration or search. Applicant establishes herein that a "control code," consistent with the specification and with the industry understood concept of a control code, is plainly different from a parity or other data-redundancy code. A parity or CRC code is a conventional data code. It changes with data values otherwise found in the bar code. It does not relate to control of the reading/scanning operation. Applicant proposes to amend claim 1 to specifically recite the nature of such control, namely for start or stop coding. This is not a new issue because control codes defined as start and stop codes were recited in claim 4.

Entry of this amendment is requested.
